## Question 1

Correct

Mark 1.00 out of 1.00

**Problem Statement**

Given an array of 1s and 0s this has all 1s first followed by all 0s. Aim is to find the number of 0s. Write a program using Divide and Conquer to Count the number of zeroes in the given array.

Input Format

First Line Contains Integer m – Size of array

Next m lines Contains m numbers – Elements of an array

Output Format

First Line Contains Integer – Number of zeroes present in the given array.

**Answer:** (penalty regime: 0 %)

```

1  #include <stdio.h>
2
3  int count_zeros(int arr[], int left, int right) {
4      if (left > right) {
5          return 0;
6      }
7      if (left == right) {
8          return arr[left] == 0 ? 1 : 0;
9      }
10
11     int mid = (left + right) / 2;
12     if (arr[mid] == 1) {
13         return count_zeros(arr, mid + 1, right);
14     } else {
15         int left_count = count_zeros(arr, left, mid - 1);
16         int right_count = right - mid + 1;
17         return left_count + right_count;
18     }
19 }
20
21 int main() {
22     int m;
23     scanf("%d", &m);
24     int arr[m];
25     for (int i = 0; i < m; i++) {
26         scanf("%d", &arr[i]);
27     }
28     int zero_count = count_zeros(arr, 0, m - 1);
29     printf("%d", zero_count);
30
31     return 0;
32 }
33

```

Time taken	4 hours 51 mins
Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

## Question 1

Correct

Mark 1.00 out of 1.00

Given an array `nums` of size `n`, return *the majority element*.

The majority element is the element that appears more than  $\lfloor n / 2 \rfloor$  times. You may assume that the majority element always exists in the array.

**Example 1:**Input: `nums = [3,2,3]`

Output: 3

**Example 2:**Input: `nums = [2,2,1,1,1,2,2]`

Output: 2

**Constraints:**

- $n == \text{nums.length}$
- $1 \leq n \leq 5 \times 10^4$
- $-2^{31} \leq \text{nums}[i] \leq 2^{31} - 1$

**For example:**

Input	Result
3 3 2 3	3
7 2 2 1 1 1 2 2	2

**Answer:** (penalty regime: 0 %)

```

1  #include <stdio.h>
2
3  int majorityElement(int nums[], int size) {
4      int candidate = 0, count = 0;
5
6      for (int i = 0; i < size; i++) {
7          if (count == 0) {
8              candidate = nums[i];
9          }
10         count += (nums[i] == candidate) ? 1 : -1;
11     }
12
13     return candidate;
14 }
15
16 int main() {
17     int n;
18     scanf("%d", &n);
19
20     int nums[n];
21
22     for (int i = 0; i < n; i++) {
23         scanf("%d", &nums[i]);
24     }
25
26     int majority = majorityElement(nums, n);
27     printf("%d\n", majority);

```

```
28 | return 0;  
29 | }
```

	Input	Expected	Got	
✓	3 3 2 3	3	3	✓

## Question 1

Correct

Mark 1.00 out of 1.00

**Problem Statement:**

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

**Input Format**

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

**Output Format**

First Line Contains Integer – Floor value for x

**Answer:** (penalty regime: 0 %)

```
1 #include <stdio.h>
2
3 int findFloor(int* arr, int n, int x) {
4     int left = 0, right = n - 1;
5     int floorValue = -1;
6
7     while (left <= right) {
8         int mid = left + (right - left) / 2;
9
10        if (arr[mid] == x) {
11            return arr[mid];
12        } else if (arr[mid] < x) {
13            floorValue = arr[mid];
14            left = mid + 1;
15        } else {
16            right = mid - 1;
17        }
18    }
19
20    return floorValue;
21 }
22
23 int main() {

Question 1

Correct

Mark 1.00 out of 1.00

**Problem Statement:**

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

**Input Format**

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Sum Value

**Output Format**

First Line Contains Integer – Element1

Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value "x")

**Answer:** (penalty regime: 0 %)

```

1  #include <stdio.h>
2
3  void findPairWithSum(int* arr, int left, int right, int x) {
4      if (left >= right) {
5          printf("No\n");
6          return;
7      }
8
9      int sum = arr[left] + arr[right];
10
11     if (sum == x) {
12         printf("%d\n", arr[left]);
13         printf("%d\n", arr[right]);
14         return;
15     } else if (sum < x) {
16         findPairWithSum(arr, left + 1, right, x);
17     } else {
18         findPairWithSum(arr, left, right - 1, x);
19     }
20 }
21
22 int main() {
23     int n;
24     scanf("%d", &n);
25     int arr[n];
26
27     for (int i = 0; i < n; i++) {
28         scanf("%d", &arr[i]);
29     }
30
31     int x;
32     scanf("%d", &x);
33
34     findPairWithSum(arr, 0, n - 1, x);
35
36     return 0;
37 }
38

```

## Question 1

Correct

Mark 1.00 out of 1.00

Write a Program to Implement the Quick Sort Algorithm

Input Format:

The first line contains the no of elements in the list-n

The next n lines contain the elements.

Output:

Sorted list of elements

For example:

Input	Result
5 67 34 12 98 78	12 34 67 78 98

Answer:

```

1  #include <stdio.h>
2
3  void swap(int* a, int* b) {
4      int temp = *a;
5      *a = *b;
6      *b = temp;
7  }
8
9  int partition(int* arr, int low, int high) {
